

Mounting a replacement TAB on the glass windshield

- Park the car in a place where the temperature is somewhere between 50 and 75 degrees.
- If it's in winter, find a heated garage to work inside.
- If it's in summer, pick a nice day, with moderate temperature and low humidity.
- If you are in a high humidity area, pull car into the shade, and use your front defroster with A/C (turn on to "high"). This will help cool the glass and drop the humidity to a proper point.
- If the glass is too hot, the adhesive will set with less strength. So make sure to wait for the car to cool down in a shade or inside garage.
- We recommend following manufacturers' products. **These products have a limited shelf life, especially if not stored properly. Similarly, don't buy one and keep it stashed in your hot glove box — it won't last.**
 - Permatex[®] Extreme Rearview Mirror Professional Strength Adhesive

- **Manufacturer/distributor is not responsible for installation-related damage to vehicle.**

1) Mark the position of the button on the outside of the windshield with a grease pencil.

2) Clean, clean, clean the glass and button with the cleaner pad in the installation kit.

3) The kit has a special cleaner/primer pad saturated with a solution that does double duty.

A solvent cleans the glass and also acts as a catalyst for setting the adhesive later. Scrub the glass and the button without touching the surface with your fingers. You don't want to leave any oily fingerprints behind — they will prevent full adhesion.

4) Open the small vial of adhesive with a razor blade and squeeze a single, generous drop out onto the face of the button.

5) Please aim precisely, and press the button onto the glass.

You get only ONE CHANCE, so we really do mean aim precisely. Hold the button in place for 1 minute, using

moderate pressure. Full curing is done within 24 hours, it is ideal to allow ample time for the curing process, or the adhesive will separate from the glass.

NOTE: If you need more information concerning one of Rydeen mirror mounting kit, please call 1-877-777-8811 and speak with Rydeen sales or technical support agent.
